

SOSX Investment

Is this company investible?

Put the data room in. See the business, its moat and everything it depends on.

WHAT SYSTEMS THINKING IS

Systems thinking treats a company as part of an ecosystem: customers, suppliers, platforms and rivals joined by loops that build a moat or wear it down, and by dependencies that can break.

HOW SOSX HELPS

Research

Agents read the data room and outside sources, every claim cited.

Build

The company and its ecosystem as one typed network.

Analyse

Prospects, moat, disruption and dependency sensitivity, with what-if on the drivers.

Report

An investability assessment, then scheduled monitoring once you invest.

THE PROBLEMS IT SOLVES

“The data room is vast, and the decision is due this week.”

“How strong is the moat, really?”

“What happens to this company if a rival, a supplier or a platform moves?”

“Once we’ve invested, we hear about trouble at the next board meeting.”

KEPT CURRENT

- ! After you invest, scheduled agents keep watch on the company and its ecosystem and tell you what changed.

AN ILLUSTRATIVE EXAMPLE

A software company whose growth rests on one app store: the dependency analysis shows how exposed its revenue is to a change in the platform’s terms, and which rival is placed to gain.
